DELIVER HIGHER-QUALITY WORK

02
OPERATE MORE EFFICIENTLY

03
EXPAND YOUR BILLABLE CAPABILITIES

04
QUALIFY FOR MORE PROJECTS AND WIN MORE WORK

05
MAKE YOUR BIM SOFTWARE WORK FOR YOU

THE BEST WAY TO MAKE SURE YOUR FIRM IS GETTING FULL VALUE FROM BIM

Building Information Modeling is a way to design, construct, and operate buildings that involves creating and using intelligent 3D models. Building professionals recognize that BIM can alleviate many of the business challenges they face by facilitating more effective collaboration and providing greater project insight earlier in the design and construction process. BIM can also provide firms with a significant competitive advantage along with other substantial and long-lasting benefits.

But what's the best way to make sure your firm is getting full value from its BIM investment?

While BIM is a process and not software, and the shift from CAD to BIM involves changes that go beyond a simple software upgrade, the BIM software package you select can make all the difference in the benefits you realize. The Architecture, Engineering, and Construction Collection from Autodesk a powerful portfolio of BIM tools that extends the power of BIM through interoperable software and services. Simply stated, Autodesk BIM gives you the power to do more.

See the top five ways the AEC Collection maximizes your BIM investment.

What is The Autodesk Architecture, Engineering, and Construction Collection?

The AEC Collection is a rich portfolio of interoperable BIM and CAD software. You choose the individual products you want to download and install – whether it's for occasional use, to meet requirements of a particular project or client, or to explore new workflows. The AEC Collection includes access to these software solutions and services.

< CONTENTS | NEXT >
01 DELIVER HIGHER-QUALITY WORK

Autodesk Revit software by itself delivers the tools for better project outcomes associated with BIM, but when you deploy Revit as part of the AEC Collection its power significantly increases. The Collection includes software and services that work with Revit to help you fully explore ideas, carefully evaluate design options, and make well-informed design decisions.

### Make design decisions smarter and earlier
Capture ideas and conceptualize designs using FormIt, and sketches and massing studies automatically translate into BIM data within Revit. Thanks to native integration with FormIt, you can avoid rework and enjoy a seamless, efficient workflow between concept and design. With Revit Live, you can turn your model into an immersive experience in one click. Walk through your model to experience your design in virtual reality and better understand your design before its built.

F AUTODESK® **FORMIT® PRO**

R AUTODESK® **REVIT® LIVE**

Focus on design
Spend more time designing and less time drawing by generating responsive 3D models in BIM. Place intelligent elements such as walls, doors, and windows only once, and Revit will automatically create accurate floor plans, elevations, sections, schedules, 3D views, and renderings. Access Revit's robust library of pre-made elements, or create your own using its accessible content creation tools. Drawings stay coordinated and in order for easier simulation and visualization.

R AUTODESK® **REVIT®**

Generate more design alternatives from a single idea
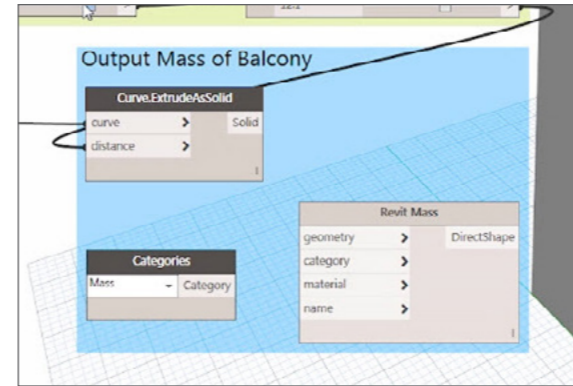

Explore parametric designs using Revit's computational design tools for design optimization and generation of complex forms. Whereas in a 2D process you might explore just a few options, Dynamo and Revit make it easy to explore dozens of options. Extend computational design into other professional applications down the line for more effective work with project teams.

D AUTODESK® **DYNAMO STUDIO**

Make smarter design decisions
Understand your design before it's built and make smarter design decisions using Insight cloud-based analysis services to optimize and iterate during the design phase. Perform sun and shadow studies using accurate lighting and materials to see how light will affect your model, or run an illuminance study to see a rendering of light within a room. With powerful performance analysis engines, you can optimize building performance early in the design process, run cost estimates, monitor changes in performance over the course of the project, and understand how the building will perform over its lifetime.

I AUTODESK® **INSIGHT™**

02 OPERATE MORE EFFICIENTLY

Together, the products in the AEC Collection amplify the effectiveness of BIM as a process that drives efficiency. The interoperability of software on the Autodesk platform minimizes the risk of data translation errors, resulting in smoother and faster design processes. As BIM has evolved, the efficiency advantages have gained momentum. Time saved translates into enhanced margins, and fewer errors leads to reduced risk and rework.

Any investment in software, regardless of size, should be taken seriously. Value and ROI always matter! When you subscribe to multiple Autodesk software solutions as part of a Collection, you get significant cost savings for maximized ROI.

Use one BIM platform for all design disciplines

Only Revit supports integrated, multidiscipline workflows that connect teams and tools and extends design to detailing. With everyone in the project collaborating in a common BIM environment, you can more efficiently and effectively coordinate and share model data – avoiding the confusion, clashes, and re-work that add cost and time to projects.

AUTODESK® REVIT®

Fewer RFIs
Reduce change orders with multidiscipline coordination, using Navisworks Manage software to review multi-sourced integrated models and to identify and resolve design phase conflicts. Plus, automate laborious tasks such as specifying materials, or generating bill of materials.

AUTODESK®
NAVISWORKS® MANAGE

Save by making decisions earlier
Conduct analysis early-on to optimize building performance and structural integrity – saving both design time and resources during the construction phase.

AUTODESK® INSIGHT™

Support CAD and BIM workflows

Maintain access to the CAD software and industry-specific versions you've relied on and continue to use. Even if you've moved to BIM, having AutoCAD at your fingertips keeps you connected to the full design team.

AUTODESK® AUTOCAD®

03 EXPAND YOUR BILLABLE CAPABILITIES

Do more and your business grows, it's that simple. BIM and the AEC Collection lets you expand the scope of services you offer to clients. With the AEC Collection, you're ready to offer services that you may currently be contracting to outside consultants.

Visualize in-house
External agencies bill a lot for the gorgeous visualizations your clients want. Expand your offering by creating stunning photorealistic renderings or visualizations that clients can use in their own presentations. Generate sophisticated, populated, walk-through renderings that help clients understand a design before it's real.
AUTODESK® 3DS MAX®

Sell the plan

Create as-built or historical models that project owners can reference when they operate or maintain buildings. Provide clients accurate data from even confined and hard-to-access spaces.

AUTODESK® RECAP™ PRO

Own the analysis

Conduct building performance analyses, including HVAC and lighting, test wind loads, verify code compliance, and generate detailed reports.

AUTODESK® INSIGHT™

AUTODESK® ROBOT™ STRUCTURAL ANALYSIS PROFESSIONAL

Partner beyond design
Extend BIM services downstream into detailing, fabrication, and into preconstruction. Model with greater levels of detail that can drive the fabrication process seamlessly for MEP and structural systems.

AUTODESK® REVIT®

AUTODESK® ADVANCE STEEL®

AUTODESK® FABRICATION CADMEP™

04 QUALIFY FOR MORE PROJECTS AND WIN MORE WORK

Having BIM capabilities puts you in a position of strength, helping you better meet client and regulatory mandates for use of BIM in projects. Put yourself in a better position to grow your firm.

Always BIM-ready

Be equipped to meet owner requirements and government mandates. As BIM adoption grows world-wide, an increasing number of government entities, as well as project owners, are specifying that projects be designed in BIM. Whether you're fully BIM adopted and just need to have AutoCAD on hand, or you're making the move from CAD-based design to BIM, the AEC Collection helps ensure that you have the software you need for both BIM and CAD workflows.

Market yourself well

Use tools in the AEC Collection to prepare more compelling proposals and visualizations that win bids. With 3ds Max and Rendering, your visualizations will seal the deal.

Be ready for future design challenges

You'll always have access to the latest innovative software and cloud technologies as soon as they're released, for whatever challenges come your way. The palette of tools in the Collection are always at-hand when you need them to meet the unique requirements of each project.

05 MAKE YOUR BIM SOFTWARE WORK FOR YOU

The AEC Collection is the most cost-effective and flexible way to access not only Revit and AutoCAD, but tools and services that let you expand Revit's functionality and your capabilities.

Get software updates as soon as they're released

Your Autodesk desktop app will notify you when a new update is available from Autodesk. Now you can be sure that you're always working with the latest, most optimized version of your software to innovate and expand your design capabilities. You retain control of which software updates you choose to roll out, to whom, and when.

Use previous software versions

You'll be able to download and use previous releases of most Autodesk software. This is a valuable option when you're working on project files created with an earlier version of software. Get details here.

Get help when you need it

Let us help you resolve issues quickly. You'll have access to:

› Senior Autodesk support specialists

› Moderated community support forums

› E-learning opportunities and exclusive training webcasts

Learn more about the benefits of technical support here.

Manage your software more easily

Subscribing to Autodesk software helps you to stay focused on designing and creating, without worrying about your software. Easy-to-use administrative tools allow you to simply and effectively manage software licenses, seats, and usage, all from your Autodesk Account.

AEC SUBSCRIPTION PLANS

How does Subscription to the AEC Collection work?

What subscription terms are available?

You can subscribe to the AEC Collection for monthly, quarterly, annual, or multi-year (24 or 36 months) terms.

What licensing options are available?

You can subscribe to single-user access, best for when software is needed for one person, or multi-user access options, ideal for situations where more than one person must share software licenses.

	Single User Access Licenses that are assigned to a single user and cannot be shared	Multi-User Access Licenses that can be shared on a network server
Type of Access		
Type of User	Individual	Team
Shared license?	No	Yes

< CONTENTS   SEE WHAT'S INCLUDED >

WHAT'S INCLUDED IN THE AEC COLLECTION

AutoCAD and verticals including AutoCAD Architecture and AutoCAD MEP

As a common CAD platform used throughout the industry, this suite of AutoCAD products allows you to access and create documentation and share with all partners on the project team.

Revit

BIM software for architects, engineers, and construction professionals.

Navisworks Manage

Project review software with advanced coordination, 5D analysis, and simulation tools.

3ds Max

3D software for creating stunning visualizations to convey design intent and win projects.

Dynamo Studio

Standalone programming environment for exploring parametric conceptual designs.

Revit Live

Architectural visualization service that creates immersive visualizations of Revit models in one click.

Robot Structural Analysis Professional

Structural analysis software for structural modeling to simulate wind load in the design and engineering workflow.

Advance Steel

Detailing software for steel design, detailing, fabrication and construction.

Structural Bridge Design

Bridge design software for the loading, analysis, and code checking of small- to medium-span bridges.

Fabrication CADmep

Use manufacturer-specific content to create fabrication-ready MEP detailed models for more accurate constructability.

FormIt Pro

An architectural modeling tool for conceptual design with location data, levels, images, and materials. Collaborate on models in real time and run energy and solar analyses.

Insight

A cloud-based analysis tool for improving energy and environmental performance throughout the building lifecycle.

Recap Pro

Use reality-capture laser scanning and photogrammetry to better understand existing conditions and verify as-built conditions.

Rendering

Create quick and easy high quality renders and panoramas from Revit and Navisworks.

Structural Analysis for Revit

A cloud-based building structural analysis tool.

AutoCAD Civil 3D

A tool for road, rail, and earthworks detailing, cut and fills, landscaping, and getting to machine control.

InfraWorks

A conceptual design tool for infrastructure that links to Civil 3D and allows you to create construction site layouts, traffic simulations, and visualizations.

Vehicle Tracking

For analyzing site movements in advance and ensuring that trucks, cranes, and large vehicles can move within the site.

START NOW

The true benefit of the AEC Collection is that it positions you to be ready for any future design challenges.

Whether it's a move to BIM or a realization that you need to expand your current BIM capabilities, the AEC Collection is the most cost-effective way to ensure that you're among the first to have access to the technologies of the future, as they roll out.

To learn more about the Collection visit www.autodesk.com/aeccollection or request a consultation with an Autodesk expert.
